**Abstract.** In the work it is built generalized description and comparison of color spaces defined by standards for digital encoding of video sequences MPEG-2 Video, MPEG-4 Visual, MPEG-4 AVC and MPEG-H HEVC taking into account the progress of encoding methods and corresponding MPEG standards, happened in recent years. Description built for proposed renovation and addition the corresponding tables in the Report ITU-R BT.2380, developed by the Rapporteur Group of the Working Group 6C of ITU-R Study Group 6 on the basis of studies conducted by the author on behalf of the Administration of Ukraine

**Keywords:** color space, digital encoding, MPEG-2 Video, MPEG-4 Visual, MPEG-4 AVC, MPEG-H HEVC

**Анотація.** У роботі побудовано узагальнений опис і зіставлення колірних просторів, визначених стандартами цифрового кодування відеопослідовностей MPEG-2, MPEG-4 Video, MPEG-4 AVC та MPEG-H HEVC з урахуванням прогресу методів кодування і відповідних стандартів MPEG, що стався за останні роки. Опис побудовано на предмет пропонованої оновлення й доповнення відповідних таблиць в Звіті ITU-R BT.2380, розробленого групою доповідачів Робочої групи 6С Дослідної комісії 6 ITU-R на базі досліджень, що їх проводять автори у сфері ТВ колориметрії від імені Адміністрації зв'язку України

**Ключові слова:** колірний простір, цифрове кодування, MPEG-2 Video, MPEG-4 Visual, MPEG-4 AVC, MPEG-H HEVC

**Аннотация.** В работе построено обобщённое описание и сопоставление цветовых пространств, определённых стандартами цифрового кодирования видеопоследовательностей MPEG-2 Video, MPEG-4 Visual, MPEG-4 AVC и MPEG-H HEVC с учётом прогресса методов кодирования и соответствующих стандартов MPEG, произшедшего за последние годы. Описание построено на предмет предлагаемого обновления и дополнения соответствующих таблиц в Отчёте ITU-R BT.2380, разработанного группой докладчиков Рабочей группы 6С Исследовательской комиссии 6 МСЭ-Р на базе исследований, проводимых в авторами в сфере ТВ колориметрии от имени Администрации связи Украины

**Ключевые слова:** цветовое пространство, цифровое кодирование, MPEG-2 Video, MPEG-4 Visual, MPEG-4 AVC, MPEG-H HEVC

Color spaces of coded video images are important part of image processing and digital coding. Generalized description and comparison of color spaces defined by standards for digital encoding of video sequences MPEG-2 Video [1], MPEG-4 Visual [2, 3], MPEG-4 AVC [4] and MPEG-H HEVC [5, 6] taking into account the progress of encoding methods and corresponding MPEG standards happened in recent years. Description built for proposed renovation and addition the corresponding tables in the Report ITU-R BT.2380 [7], developed by the Rapporteur Group of the Working Group 6C of ITU-R Study Group 6 on the basis of studies conducted by the authors on behalf of the Administration of Ukraine

Digital video coding system colorimetric characteristics specified in MPEG video coding standards are shown in the Tables 1, 2, 3, which combine according data from Tables 6-7, 6-8, 6-9 from MPEG-2 Video, Tables 6-8, 6-9, 6-10 from MPEG-4 Visual, Tables E-8, E-9, E-10 from MPEG-4 AVC and Tables E-3, E-4, E-5 from MPEG-H HEVC.

Primaries chromaticity and reference white coordinates for given parameter values of colour\_primaries are shown it Table 1.

Opto-electronic conversion characteristics – transfer primaries channel characteristics for given parameter values of transfer\_characteristics are shown in Table 2. The table specifies:

$L$  – image primaries tristimulus values, that are relative luminance levels,  $R, G, B$  image components;

$V$  – relative levels of gamma-corrected signals  $R, G, B$  – image components  $E'_R, E'_G, E'_B$  ;

$E'_Y$  – normalized luminance signal normalized to  $\overline{0;1}$ ;

$E'_{PR}, E'_{PB}$  – colour-difference signals normalized to  $\overline{-0.5;+0.5}$ .

Luminance signals and colour-difference signals matrixes coefficients for given parameter values of matrix\_coefficients are shown in Table 3 with exception of cases when matrix\_coefficients values are equal to 0 and 8. Value 8 in MPEG-2 Video, MPEG-4 AVC and MPEG-H HEVC corresponds to signal coding  $Y, C_R, C_B$  processed by algorithms specified in these standards where  $C_R, C_B$  signals are in terms of  $C_G, C_O$ . Value 0 in IEC 61966-2-2, MPEG-4 AVC and MPEG-H HEVC corresponds to  $RGB$  space signals  $E'_R, E'_G, E'_B$  coding processed by algorithms specified in these standards.

Replacement the content of the Tables 2.8, 2.9, 2.10 in new version of the Report ITU-R BT.2380 by the content of the Tables 1,2,3 may provide latest information on color spaces of coded video sequences used in the world for the moment of publication this work.
